MANAGEMENT SUMMARY REPORT – STREAMFLIX

To: CEO, StreamFlix
From: Anisha Azmi, Data Analyst
Subject: Platform Performance Analysis and Recommendations
Date: September 11, 2026

This report summarizes the key findings from the analysis of StreamFlix's performance and subscribers data. The analysis focuses on overall platform performance, engagement overview, subscribers, experience, catalogue and investment insights. The objective is to identify the platform's strengths, risks and opportunities for future growth.

1. EXECUTIVE SUMMARY

StreamFlix serves 15K subscribers across 20 countries and 9 regions, generating 3.33M total watch hours. Engagement is solid, with a 65.31% average content-completion rate across 650K plays. However, the 25.34% churn rate is the primary business concern and requires immediate retention action. English-language content drives the largest share of watch time, while Drama leads both watch hours and completion. Viewing is concentrated on Smart TVs and mobile devices, making these the most important platforms for experience investment. The catalogue contains roughly 9K titles with $21.21bn in licence costs, so investment efficiency and licence renewal discipline are essential.

2. TOP 3 FINDINGS

- **Retention is under pressure.** Overall churn is 25.34%, with female (25.52%) and male (25.32%) subscribers experiencing similarly high churn.
- **Drama and English content are the strongest engagement drivers.** Drama records the highest genre completion total (6.2M) and watch time (0.50M hours); English alone contributes approximately 1.3M watch hours.

- **The audience and viewing behaviour are concentrated.** The United States is the largest market with 3,774 subscribers, Standard is the leading plan (40.67%), and Smart TV is the largest device by content duration (104M).

3. RISKS IDENTIFIED

StreamFlix should concern for the following:

RISK	EVIDENCE
1. High churn rate	25.34% is the churn rate.
2. Weak monthly watch trend in the second half of year.	There is a sudden fall of monthly watch trend after may (0.39 to 0.17m).
3. Genre investment efficiency varies	Animation has the strongest watch hour per $1K spend efficiency while horror is the lowest.
4. Large licence cost exposure	Total licence cost is $21.21bn
5. Experience volatility	Positive reviews goes high in may(19.2K) then declined sharply in June to 3.0K.

4. OPPORTUNITIES

- Build more high-quality English and Drama content, since these categories currently produce the strongest watch time and completion.
- Increase retention among the mid-30s to early-40s audience, the platform's largest subscriber age segment.
- Optimise the Smart TV and mobile experience, which represent the two biggest device audiences.
- Use the strong United States customer base as a testing market for retention offers, personalised recommendations, and new content launches.
- Redirect investment toward efficient genres such as Animation while improving, renegotiating, or reducing low-efficiency Horror investments.

5. RECOMMENDATIONS

- Launch some personalised offers, renewal reminders for subscribers for churn reduction, measure churn monthly by gender, age, device, country and regions.
- Improve Smart TV and Mobile watching prompts, searchs , playback and cross device continuity on these two priority platforms.
- Create a second half engagement plan, schedule major releases in June to December period to lower the drop watch time.

6. CONCLUSION

StreamFlix has strong engagement foundations—3.33M watch hours, a 65.31% completion rate, and clear strength in English, Drama, Smart TV, and mobile viewing. However, the 25.34% churn rate and uneven second-half watch-time trend require urgent attention. Management should focus on personalised retention, high-return content investment, and a stronger device experience to convert engagement into sustainable subscriber growth and improved return on licence spending.
